Innovative Tactical Cyber Solution

For 0-click acquisition
of mobile devices

intellexa

CREATE INSIGHTS,
WIN THE DIGITAL RACE

Long-range Agent Delivery to Mobile Devices

GSM BaseBand 0-click target acquisition

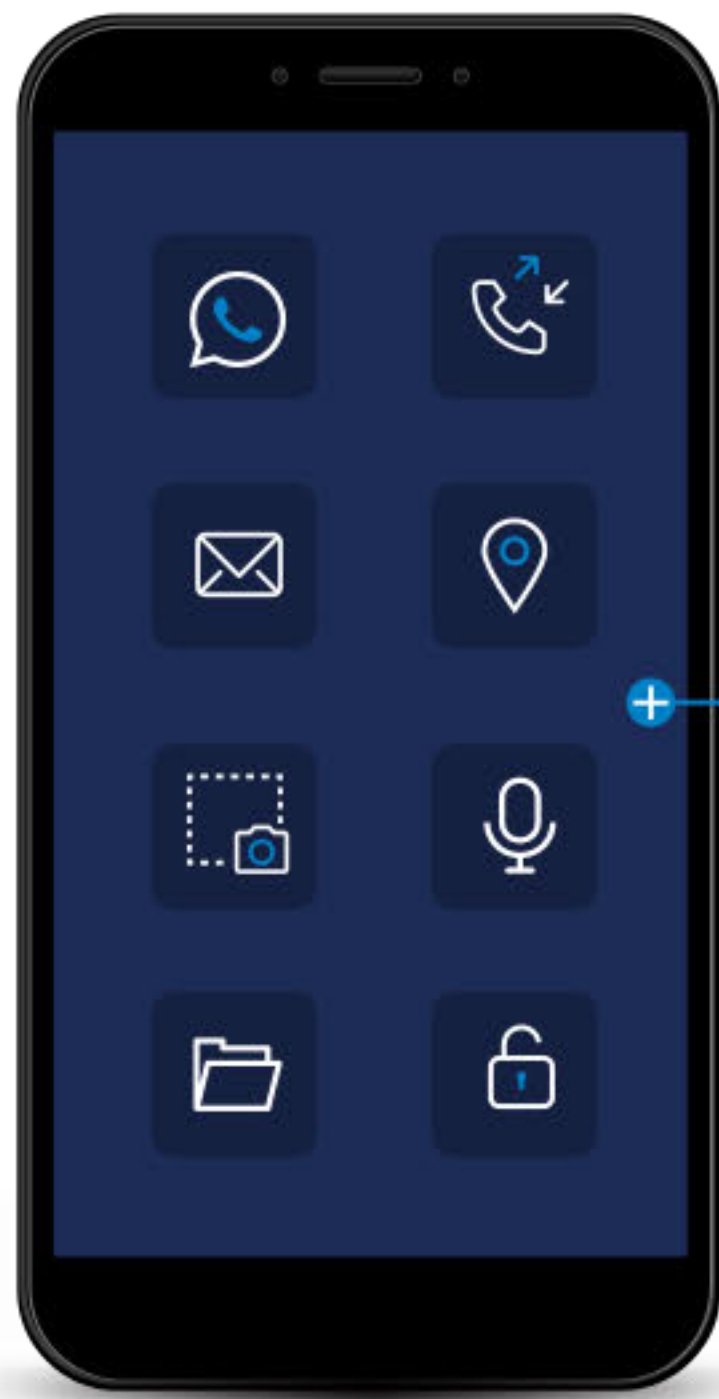

Intellexa presents Triton

An innovative tactical cyber technology, which enables covert 0-click acquisition of Samsung mobile devices. The infiltration process is performed swiftly and immediately, without any indication on the target's device. There is no action required by the target, and during the acquisition the device can be in complete idle mode with the screen turned off.

Following target acquisition, Triton installs an on-device robust cyber agent, which enables remote and continuous data collection from the device. The agent provides access to a comprehensive set of instant messaging applications and data stored on the device, as well as active control of the device's sensors such as the camera, microphone, GPS and more.

Robust & Continuous Data Collection Capabilities

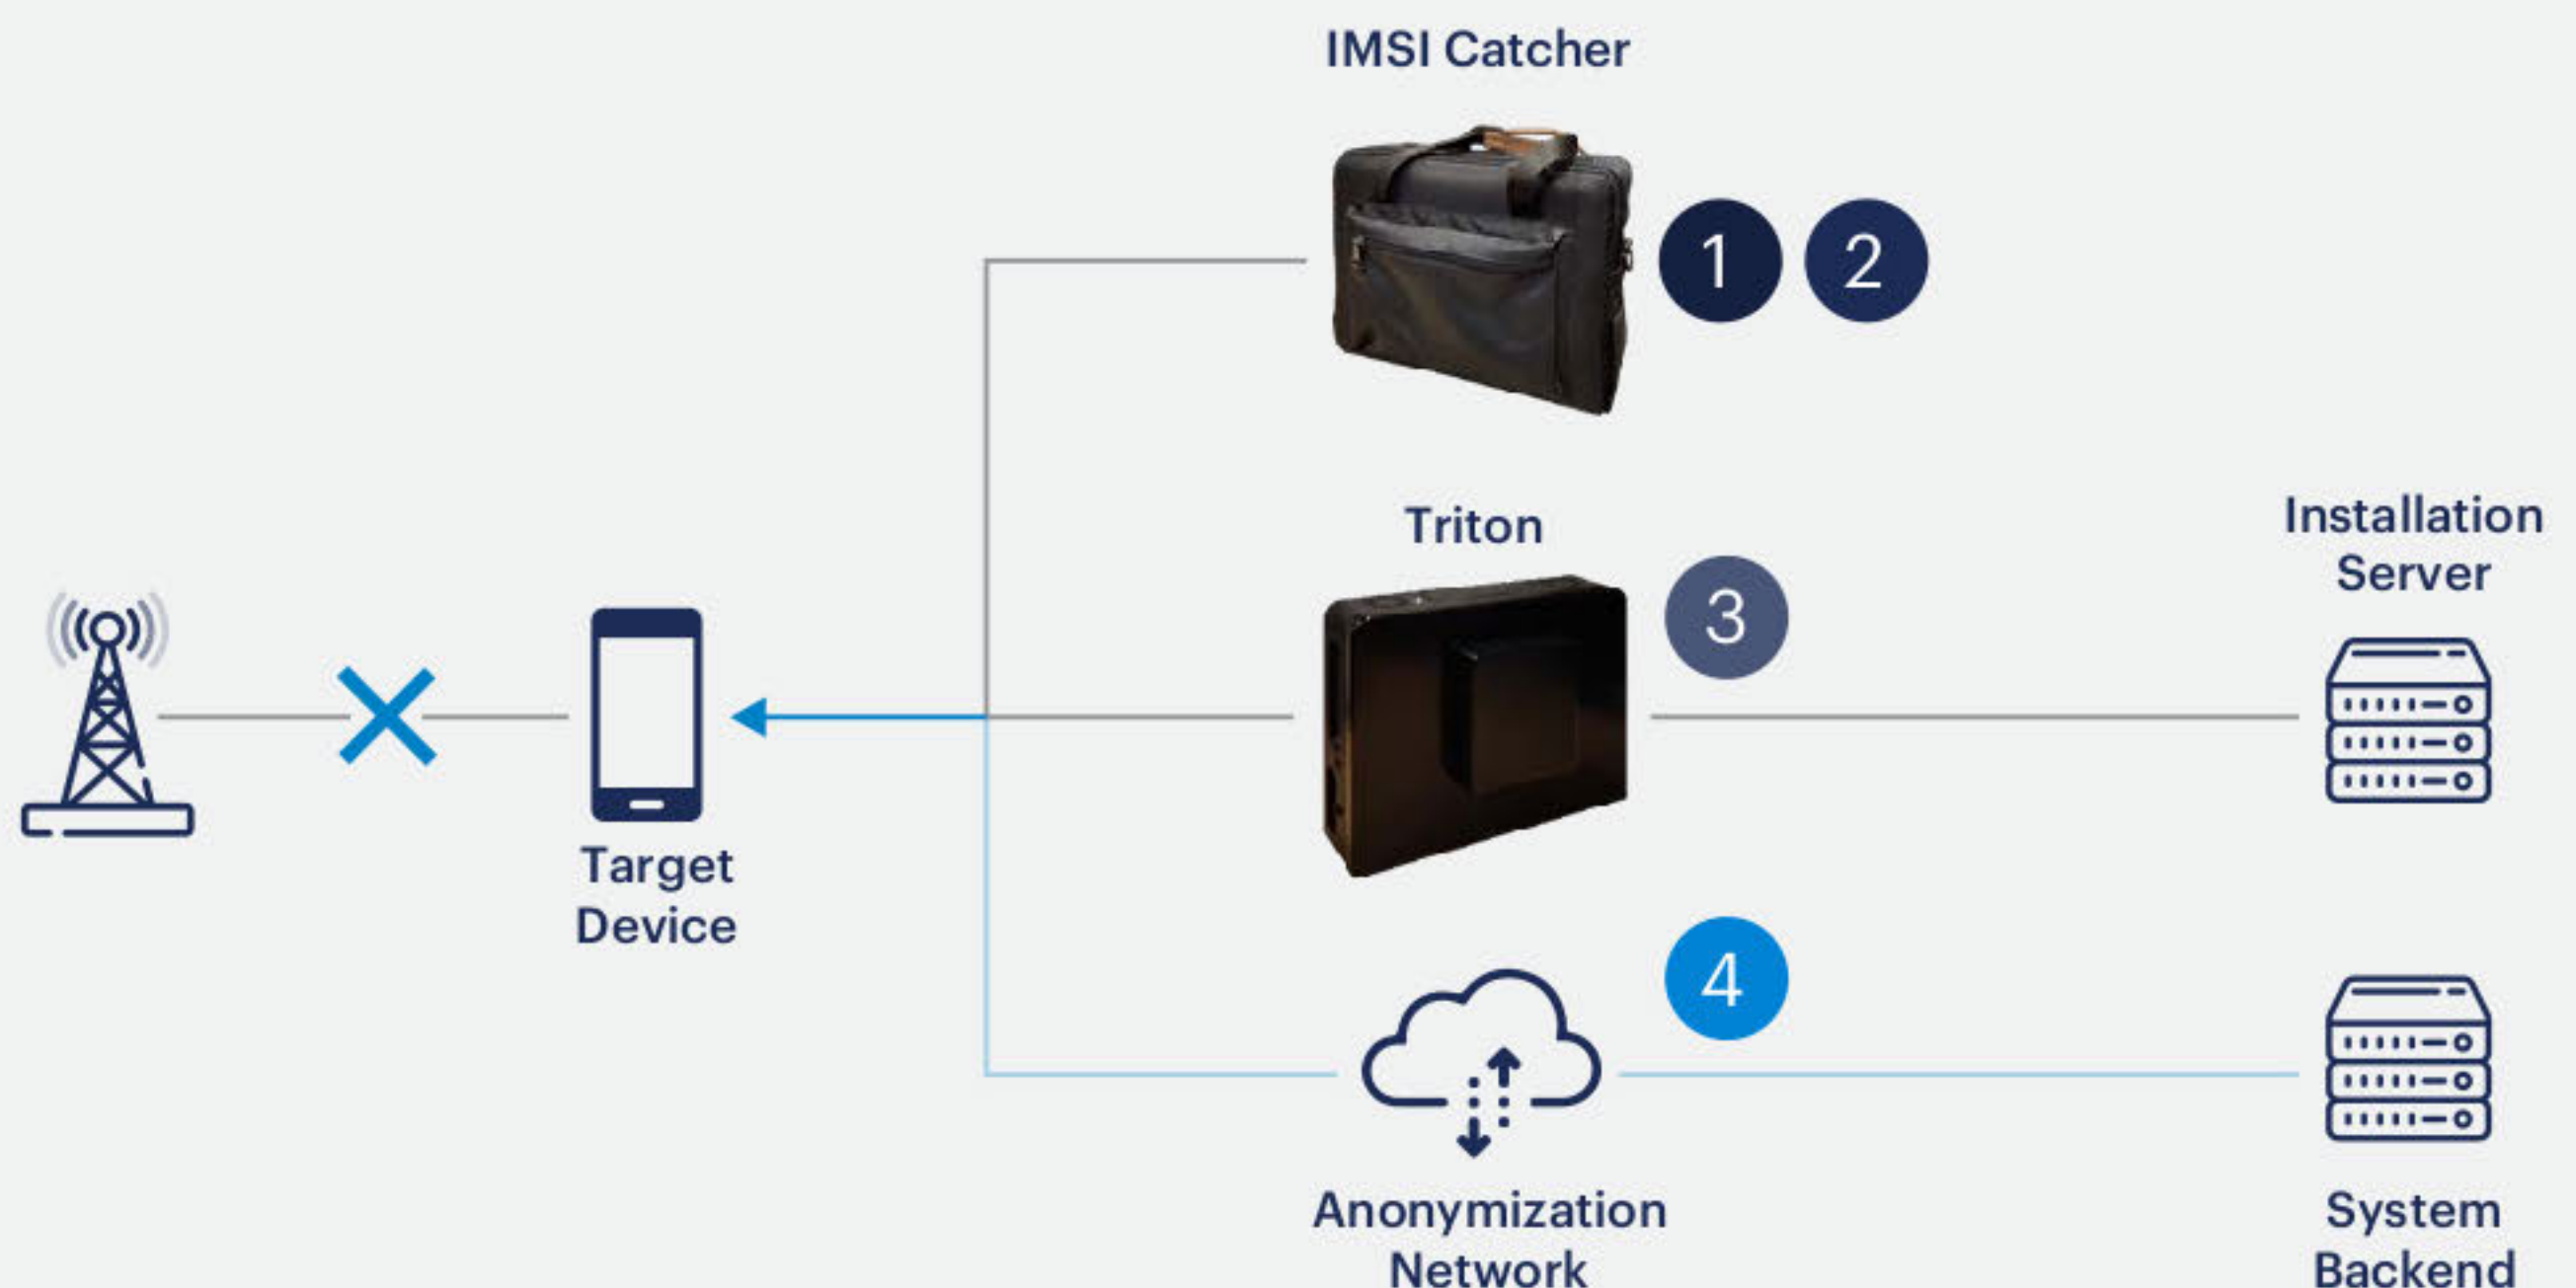

- + **Instant Messaging**
WhatsApp, Telegram, Skype, Signal and many more
- + **Voice & VoIP recording**
Record audio coming from all calls, including Zoom, Teams and more
- + **E-mails**
Gmail, Apple mail, Samsung mail and more
- + **Device Location**
GPS based location of Mobile device
- + **Screenshots & Camera**
Capture images covertly using the device's sensors
- + **Activate Microphone**
Covert trigger of ambient recording
- + **On-Device information**
Media, files, contacts & call logs, device info, browser history
- + **Passwords & Tokens**
WiFi passwords, user passwords, certificates & tokens

Triton Operational Flow

Triton tactical operation requires the target to be downgraded from 5G/4G/3G to a specific channel, then delivers the agent to the mobile device with a simple click. The downgrading process can be performed with Intellexa's IMSI catcher, or with any IMSI Catcher which can be useful, should the customer already possess one.

- 1 **IMSI Catcher**
Performs network scan and detects the target's IMSI
- 2 **IMSI Catcher**
Downgrades the target to a specific channel
- 3 **Triton**
Interception and acquisition of the target
- 4 **System Backend**
Remote data extraction

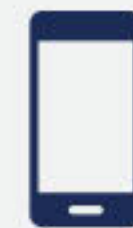

Covert 0-click acquisition of Samsung mobile devices

Triton Benefits

Triton

Target Device

+ Tactical 0-Click target acquisition

Triton presents groundbreaking acquisition capabilities

With no interaction with the target there is no need for the target to use a browser or any other app, and the device can be in complete idle mode.

+ Support for various Samsung devices

Triton supports the cyber acquisition of the leading Samsung devices

Triton supports the most common Samsung devices, with the latest models, running the latest Operating Systems

+ Swift and distant acquisition

Triton provides long-range field cyber-operation with remote data collection

The infiltration process is performed in the field and takes up to 3 minutes, with distances ranging in the hundreds of meters

Target Device

System Backend

+ Remote and continuous data collection

Triton innovative technology combines field operation with remote data collection

Following the infiltration process, Triton installs an on-device cyber agent to perform monitoring

+ Robust and resilient agent and collection capabilities

Triton enhances LEAs with the most powerful solution to monitor targets

The agent provides remote extraction capabilities of instant messaging applications, contacts, emails, and many more. The agent also enables control of the device sensors such as microphone, camera, screenshots and GPS

About Intellexa

WWW.INTELLEXA.COM

Our cutting-edge solutions help you to protect your communities from criminal activities, ensuring better safety and security.

We develop technologies to empower LEAs and intelligence agencies to better protect people and communities

Why Intellexa?

We are a leading intelligence alliance developing a comprehensive portfolio of premium, state-of-the-art technologies and intelligence solutions for law enforcement agencies worldwide.

Our proprietary technologies provide cutting-edge multi-vector cyber sensors. Our solutions focus on providing complete tools for targeted investigation via multiple collection sensors integrated into a single investigation platform.

Our investigation platform is source agnostic in order to utilize all the potential data for the creation of a comprehensive intelligence image.

Intellexa is your single trusted provider - offering a one-stop shop for all intelligence needs and solving the challenges of vendor fatigue. Intellexa boasts a global presence, with our main headquarters located in Athens.
